

FLAT FLAME AND EXCESS AIR BURNERS SIDEWINDER - SW SERIES

FEATURES

- Mixer body: cast iron G25
- Plate: cast iron G25
- Gas tube: AISI304
- Pre-heated air: up to 450°
- Suitable for different types of gas: CH4 /L.P./propane/etc.
- Standard refractory block, max. temp.: 1750°C
- Capacity range: 16 to 1500 kW
- Excellent flame stability: excess air
excess fuel
on ratio firing
- Low NO_x level.
- Wall mounting flanges to fasten the block holder to the furnace shell are threaded to allow for positioning of accessories: pilot burner, flame detectors (electrodes or UV scanners), peepsight.
- Separated air and gas inlets, mixing at discharge point, no flashback.

F350301

APPLICATIONS

- Cap annealing furnaces.
- Reverberatory furnaces.
- Aluminium melting furnaces.
- Zinc melting furnaces.
- Cone and pit furnaces.
- Billets reheating furnaces.

F350302

DESCRIPTION

Sidewinder gas burners are nozzle-mixing units with a high velocity, spinning, air flow. The swirling air stream produces an anticlockwise vortex inside the refractory block. Gas enters the vortex, mixing rapidly, producing intense combustion. The inverted parabolic shape of the burner block port works with the vortex to pull flames flat to

the furnace wall at firing rates and mixtures. Maximum furnace temperatures are obtained at high-fire with stoichiometric air and gas flows. Excess air operation allows for obtaining quite cold flame temperatures without changing the volumes of the fuel gas.

INSTALLATION

Sidewinder gas burners may be installed to operate in any position. Wall mounting flanges are available to fasten the block holder to the furnace shell. Lifting eye-bolt hangers are available for furnace roof suspension installations. The inside flared face of the refractory block must be flush with the interior furnace wall. The furnace refractory should be set to leave 12.5 mm on all sides of the block. This space should be packed with flexible, refractory, ceramic fibre protected by

20 mm of refractory concrete on all sides to allow for expansion of the walls. Flexible connectors are recommended for air and gas connections at the burner to allow slight movement or misalignment of piping and are required when pre-heated air is involved. Air and gas connections are Pyronics' standard threaded, or welding flanged type. They may rotate by 90°.

IGNITION AND FLAME DETECTION

Sidewinder gas burners must be ignited at low fire. They can be ignited with a blast pilot, P86PBST, or electrode DSE. The pilot burner should be cut off after the ignition of the main burner therefore flame detection must be carried out by UV-scanners placed in an

anticlockwise position as compared to the pilot burner. Flame detection systems are required on all burners operating at furnace temperatures below 750°C.

Catalog No.	Pilot burner ignition		Electrode ignition	
	Ignition	Detection	Ignition	Detection
SW-1	P64PBST	UV-2 / 6EN-150 *	DSE-6	UV-2
SW-2	P64PBST	UV-2 / 6EN-150 *	DSE-7	UV-2
SW-3	P64PBST	UV-2 / 6EN-150 *	DSE-7	UV-2
SW-4	P64PBST	UV-2 / 6EN-150 *	DSE-7	UV-2
SW-5	P64PBST	UV-2 / 6EN-300 *	DSE-8	UV-2
SW-6	P86PBST	UV-2 / 6EN-300 *	DSE-8	UV-2
SW-7	P86PBST	UV-2 / 6EN-300 *	(not available)	(not available)
SW-8	P86PBST	UV-2 / 6EN-300 *	(not available)	(not available)

(*) In most cases, we suggest you to make flame detection through UV- scanner. In some particular cases, it is possible to use continue pilot burner with detection electrode.
